

Jet Fan – Roof Mounted Attic Fans

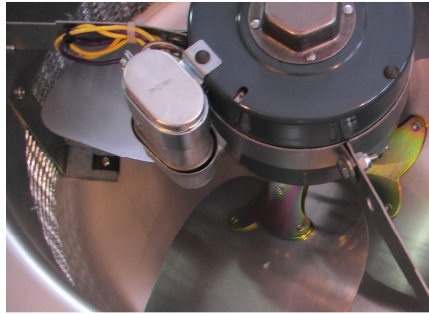

“Still Hot Even With Your A/C Blasting? Sweating? Can't Sleep? While Your Air Conditioner Keeps Burning Your Hard-Earned Cash?”

Who else wants to be rescued from brutal summer heat?

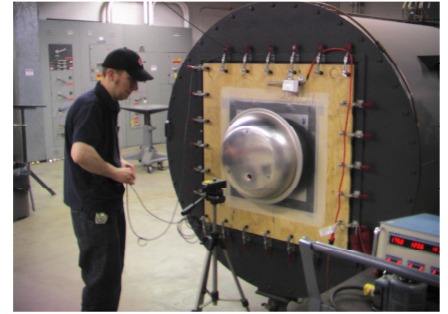

Your attic will never ever get up to 150 degrees again, so the rooms below your attic will be cooler.

American Made with Stainless Steel Bolts, and Aluminum that Twice as Thick so it Will Not Rust or Blow Apart in the Wind

Quietest Motor Lasts 3 Times Longer, Using Only ½ the Power While Blowing Out More Hot Air

Tested at an Independent Laboratory for Assured Proven Performance

“Running AC without an Jet Fan Is Like Burning \$100.00 Bills in Your Barbeque” - Jet Fan Man

Jet Fans housings are built to survive high winds. They're all heavy gauge rust proof aluminum with stainless steel bolts that don't leave rust streaks down your roof. The truly heavy-duty screen actually stops surprise attacks from birds or squirrels trying to get into your attic. All the Jet Fan parts and components are custom made for Jet Fan right here in America.

The Jet Fan electric motor is quieter and has thermal protection for added safety, and has a capacitor for added life and efficiency. An adjustable and accurate snap action thermostat turns the Jet Fan on and off automatically while a firestat protects your home in the event a home fire by shutting off the fan so it will not make matters worse like the cheap roof fans do. Higher quality parts are what make the Jet Fan better and maintenance free. Jet Fan's warranty is pro-rated for ten (10) years and beyond with a discount for homeowners for as long as they own their home if they ever need replacement parts.

Model Number	H.P.	Watts	Volts	Amps	CFM@ .03 S.P.	Blade Diameter	Flashing Size	Approximate Attic Size Covered	Intake Vent Required	Shipping Weight Pounds
707	1/15	132	120	1.1	850	14"	24" x 24"	1000 SQ. FT.	360 SQ. IN.	25
